

ACEI SCREW PLUGS - MAGNETIC PLUG

2016-6

Series Promotion 2016-6

Magnetic plugs made by ACEI factory are based on the designs of DIN/SAE/ASME/JIS/GB and other companies' standards. The magnet is made from neodymium strong magnet, SmCo magnet with high thermo-stability. Ferrite permanent magnet assembled on the stud end by gluing, riveting, embedding, and sometimes designed with NBR/FKM seal ring. Thanks to this characteristic, the plug not only keeps it's basic sealing performance, but also avoids the risk of collision with inner gears. Therefore the magnetic plug is recommended for gearboxes and in any application where gears are lubricated. For more products, please browse our website: AlloyProducts.com.
